WHITEPAPER

POLYYORK

WHITEPAPER

— Introduction

Welcome to PolyYork!

PolyYork Finance is a new DeFi project on Polygon featuring a deflationary token model with a maximum supply of 31,000 YORK tokens on L1 and 70,000 GOLDYORK tokens on L2.

After reviewing several yield farming models we decided on a low emission rate, low supply, layered farming approach to our platform. This model will help end users earn maximum yields over a long period of time. Buyback and burns will help stabilize a price floor for long term holders.

Introduction Slide

PolyYork Project Overview

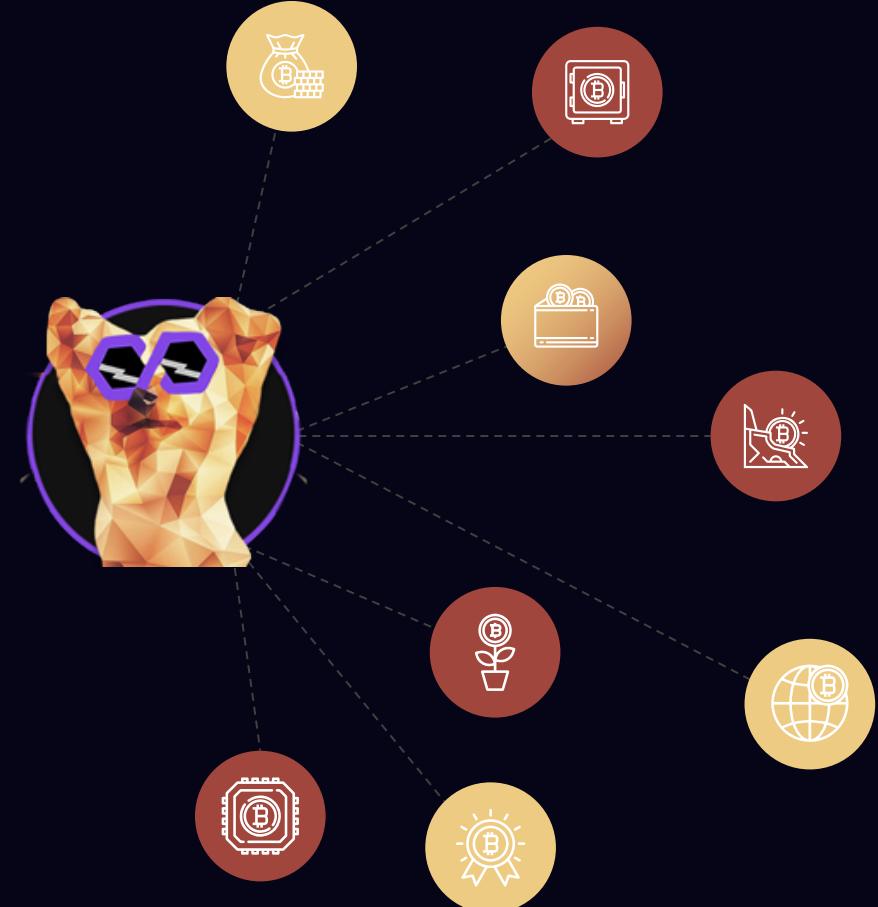

The most popular element of DeFi is farming. Every project on market even the biggest ones are using farms for rewarding users for using their products and for providing liquidity. It's a highly attractive investment opportunity with already a hundred billion dollars locked on smart contracts, mostly for purpose of farming protocol tokens. The most popular and most forked format of farm contracts is Masterchef. It's open-source and as other open-source code became a foundation for innovation in DeFi. Many developers iterate and improve code, build new products.

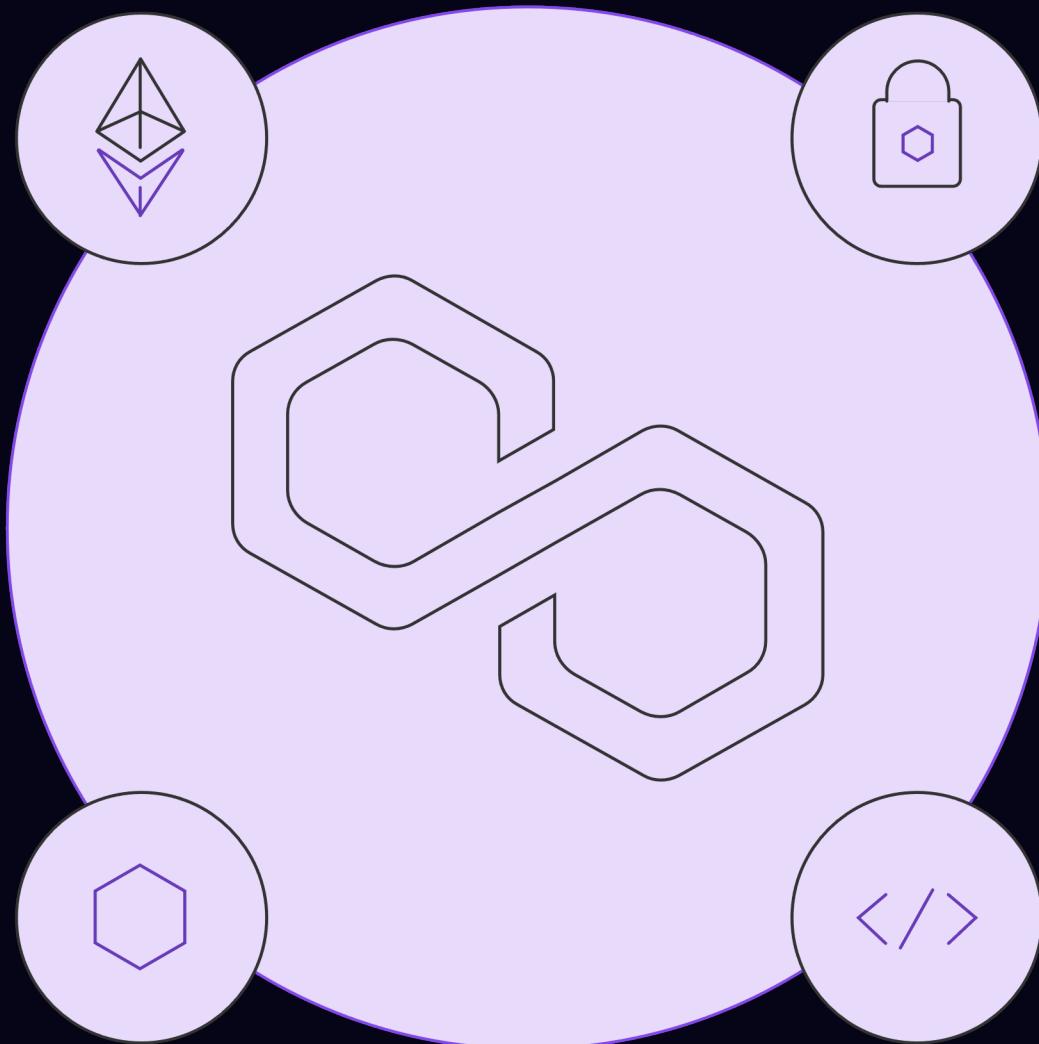

Access to code of contracts has everyone, but really read, understand it and verify can only developers. That's why the current farm market is full of scams and "rug pulls". Rugdoc team is doing a great job to prevent investors from getting to the traps. But with farms marked as "low risk," there are many problems as well. Our mission is to make the farm market transparent and fair.

— Why

Why we choosed **York** for our project?

We chose Yorks, because our team is dog lovers. Our entire team has dogs. We chose York because one of us has York, in life her name is Barney. We love cats too, but dogs have won our hearts.

— Why

Why we choosed **Polygon** (Matic) instead of other **chains?**

Polygon is a protocol and a framework for building and connecting Ethereum-compatible blockchain networks. Aggregating scalable solutions on Ethereum supporting a multi-chain Ethereum ecosystem.

Polygon combines the best of Ethereum and sovereign blockchains into an attractive feature set. Built by developers, for developers. This why YORK is a polygon network token.

Our Vision

PolyYork Vision

Our future principle objectives:

- We will associate with Polydoge & Polypup, Polycrystal.
- We will do listing in Coinmarketcap.
- We will do listing in Coinsbit.

Our Objectives

PolyDog

is a digital currency with one of the most vibrant communities on the powerful Polygon Network.

PolyCrystal

The Definatory Yield Farm with a \$CRYSTL Clear Future.

PolyPup

PolyPup Layer 2 Farming. Only 65,000 Tokens Maximum Mint. Farming has started! Farms & Staking.

CoinBit

Coinbit Store. Is an online shopping platform allowing users to buy any product with cryptocurrency from around the world.

CoinMarketCap

The global crypto market cap is \$1.91T, a 1.22% increase over the last day.

L1 Farm

PolyYork L1 Farm

During YORK's build out holders of the token will receive a yield during any transaction that takes place on the PolyYork. Meanwhile, the token supply will begin to burn causing an anti inflationary scenario. PolyYork was launched with an initial supply of liquidity in the form of YORK LP Tokens. This was performed to protect investors by preventing the possibility of a rug pull via liquidity removal for example.

L2 Farm

PolyYork L2 Farm

At the moment we have a heated audience on Twitter. As you know L1 started from 0, but L2 will do better as everyone definitely knows us in this market right now. New partnerships, announcements, an expert promotional organization has been recruited, all this will work flawlessly, and your profits will increase. Also, Bart Baker is our partner on the L2 farm.

PolyYork Roadmap

— YORK Tokenomics + Allocation

PolyYork Tokenomics

Name: YORK Token

Symbol: YORK

Contract: 0x21dE43d96CFddd203DA3352545E0054534776652

Chain: Polygon

Farming will be enabled at block #17534600

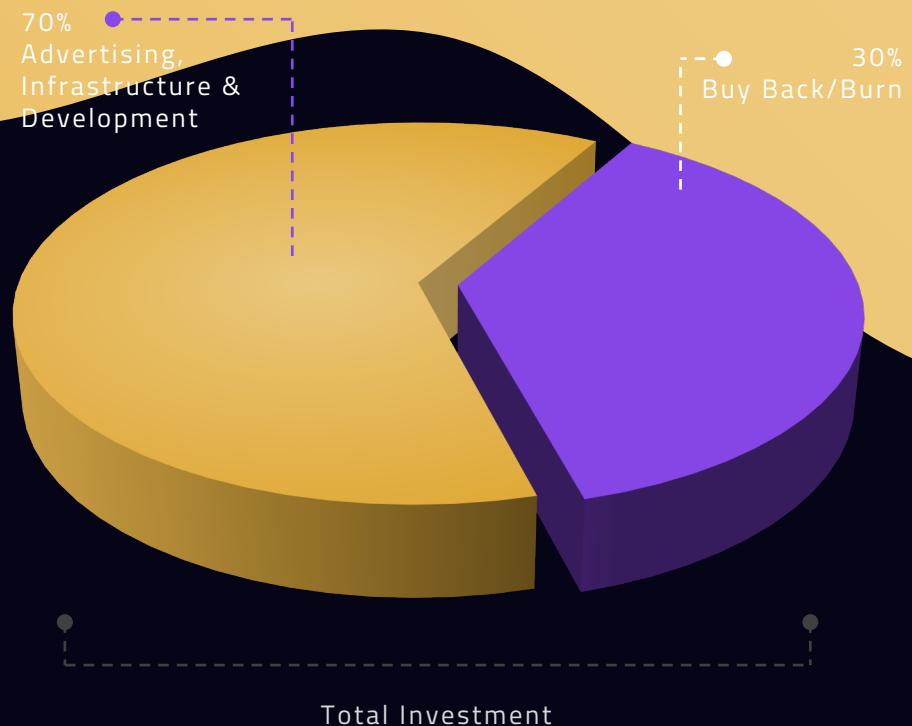

Total Mint: 3,000 YORK Tokens and manually we will increase it till 31,000

Emission Rate: 0.05 YORK per block

30% of Deposit Fee will be used for buyback/burn

70% will be used for advertising, infrastructure and dev fee

100% of deposit fee will be used for buybacks on new pools

GOLDEN YORK Tokenomics + Allocation

Golden York Tokenomics

Name: GOLDEN YORK Token

Symbol: GOLDYORK

Chain: Polygon

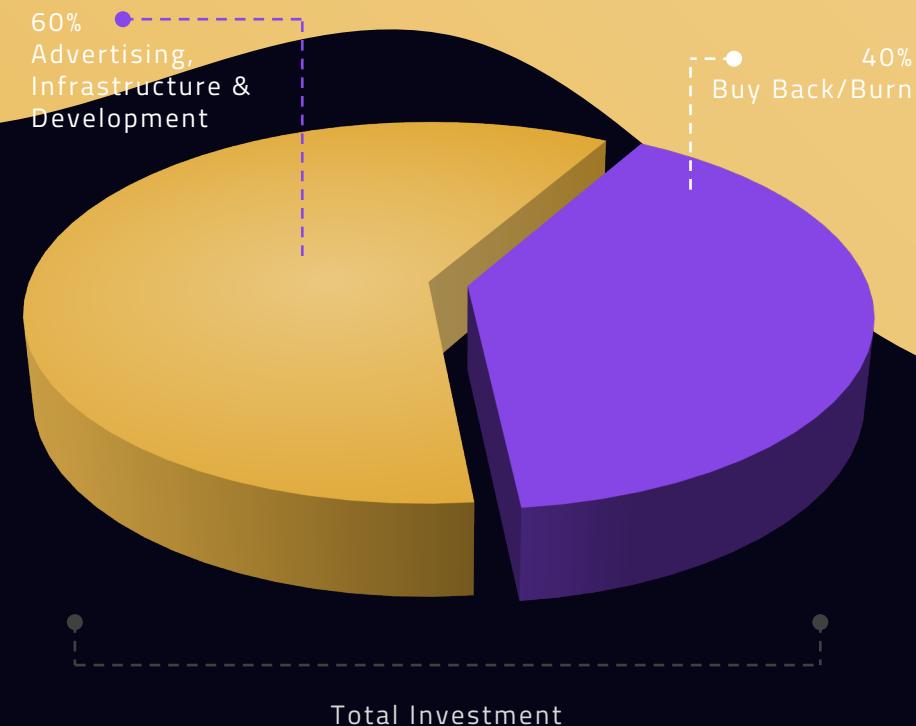

Initial Supply: 1,000 YORK

Max Supply: 70,000 YORK

Emission Rate: 0.02 YORK per block

40% of Deposit Fee will be used for buyback/burn

60% will be used for advertising, infrastructure and dev fee

— Problem & Solutions

Problems & Solutions of your coins

PROBLEMS

Central bankers around the world are printing money to finance government spending and keeping interest rates low. Most Cryptocurrencies have an increasing supply of tokens. The consequences are inflation and devaluation. This is to the disadvantage of existing holders.

SOLUTIONS

Our tokens are solid, since we passed the KYC confirmation and the adversaries of SCAMs, we are a dependable long haul project with Rug Pull protection.

— Rugdoc "Low Risk" + KYC

Rugdoc "**Low Risk**" + KYC

RugDoc KYC: Project owner has KYC'd to us, and has signalled his transparency and commitment to this project. We have also confirmed that the deployer wallet is owned solely by the project owner, and that he alone has access to deposit fees.

— Dividends

PolyYork Dividends

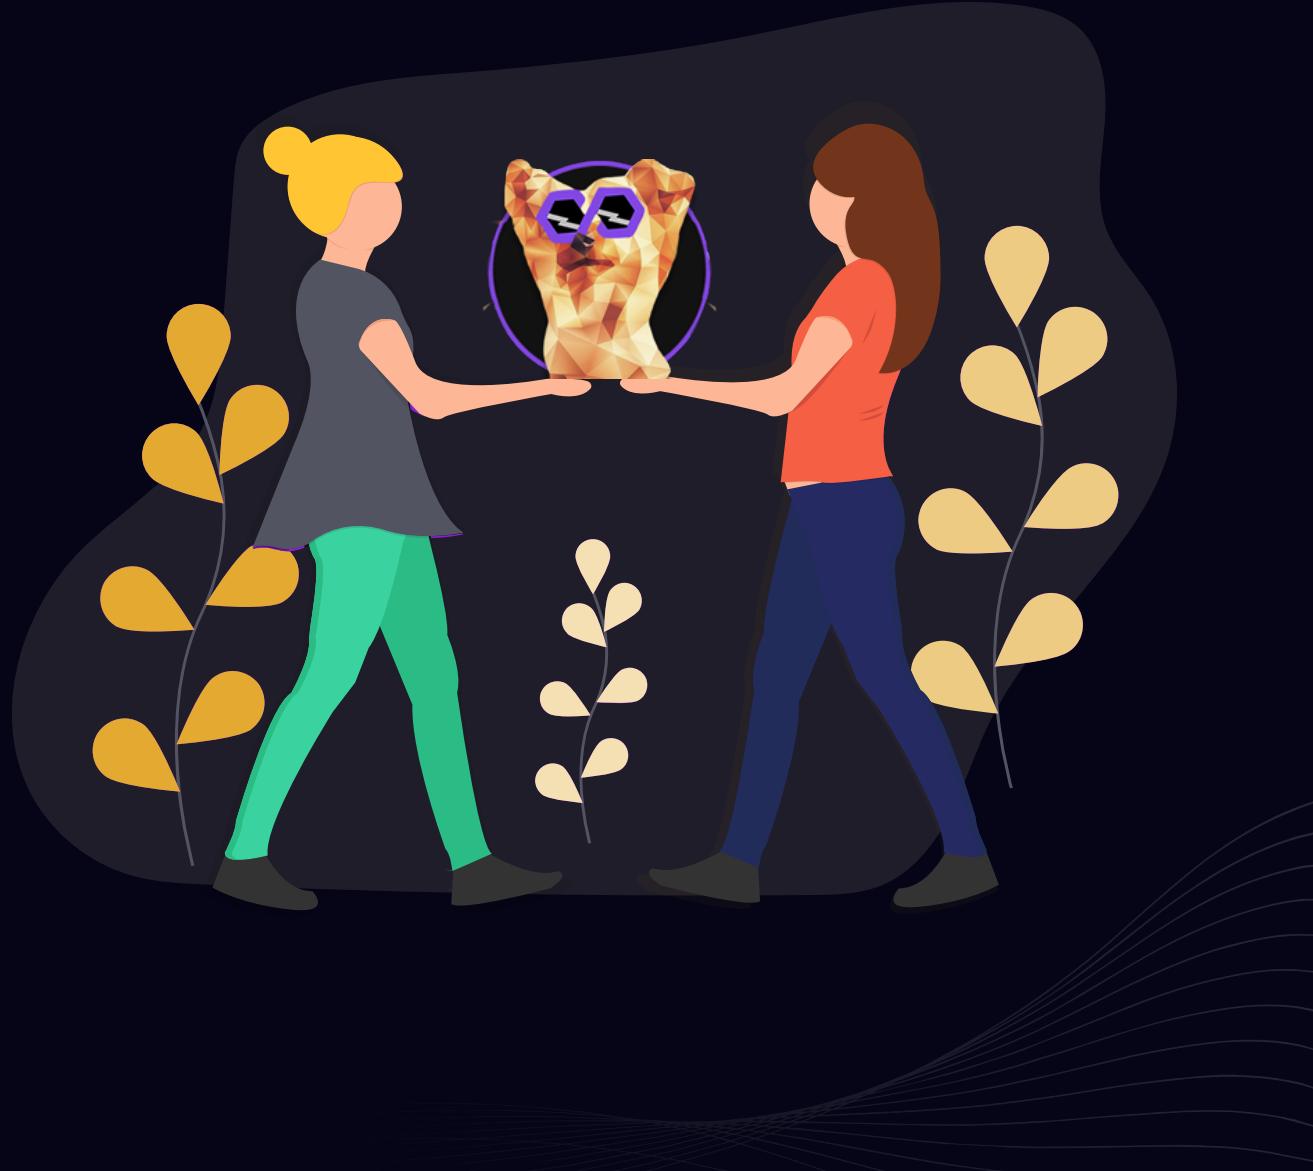

You can stake GOLDYORK to earn YORK, DMA, BTC, ETH, AAVE, USDC and many other tokens. If you want, you can unstake at any time. We are one of the few farms who decide to please you with a dividend system, because you deserve it!

Referral System

PolyYork

Referral System

YORK is one of the major players in the market which has made its name in derivatives and futures. PolyYork has also brought in a referral program that gives each user 1% off trading fees as an invitation bonus. On the other hand, creating your own referral code helps you earn more commissions.

Launch on Binance Smart Chain

Binance Smart Chain (BSC) is a high-end blockchain infrastructure created by Binance, one of the world leaders in providing blockchain solutions. Binance Smart Chain was designed to fulfill the same purposes as Ethereum - the ability to launch tokens, smart contracts and decentralized applications - but with a much better efficiency.

While the Ethereum network uses a token format called ERC-20, the BSC blockchain has its original, innovative token format: BEP-20. Tokens utilizing the BEP-20 format can be purchased, sold and transferred with the fees that can be 30-100x lower compared to Ethereum fees.

Not only the fees, but also the transaction times of Binance Smart Chain are much lower than Ethereum's. Overall, BSC is simply a much more effective solution than ETH. Since PolyYork is an ecologically-oriented project, choosing the more energy-efficient solution was the obvious choice to make.

Conclusion

PolyYork Conclusion

We believe that PolyYork can become one of the most popular, cool and demanded yield farming projects. We listen to the advice of our community and work late every day to make one of the best farms out there. Also, PolyYork is more than a project for us. We believe in cryptocurrency and want to contribute to its development. Do not forget to subscribe to us on social networks so as not to miss the latest news of the project!
